PMU EYELINER AFTERCARE

information & advice

Congratulations on your new eyeliner! Following these aftercare instructions closely will help your eyeliner heal beautifully and ensure lasting results.

Day 1: Immediately After the Procedure

- Cleansing: Gently cleanse around your eyes with a mild, fragrance-free cleanser and water. Avoid rubbing the treated area.
- Aftercare Ointment: Apply a thin layer of the aftercare ointment provided by your artist to keep the area moisturized and protected.

Days 2-14: Ongoing Care

- Ointment Application: Using a clean cotton swab, apply a small amount of aftercare ointment to the treated area twice a day.
- Avoid Touching: Refrain from picking, scratching, or rubbing your eyeliner to prevent scarring or pigment loss.

Additional Care Guidelines

- Water Exposure: Avoid getting the treated area wet for the first 24 hours. Keep it dry during activities such as showering. For the next two weeks, avoid swimming, saunas, and hot tubs.
- Sun Exposure: Protect your eyeliner from direct sunlight as it can fade the pigment. Sunglasses can provide extra protection.
- Makeup & Skincare: Avoid applying any makeup or skincare products on or near the treated area for at least one week. When you resume, be gentle to avoid disrupting the healing process.

Managing Side Effects

- Itching or Swelling: You may experience slight itching, redness, or swelling around the treated area. Apply a cool compress gently if needed, but do not scratch or pick at the area, as this can cause complications.

Healing Expectations

- Color and Shape Adjustments: Your eyeliner may initially look darker, thicker, or more intense than expected. This is normal and part of the healing process. Over the next few weeks, the color will soften and the final result will appear more natural.

If you have any questions or concerns about your aftercare, please contact your artist. Follow-up appointments may be necessary to ensure that your permanent makeup heals properly.

Remember that permanent makeup is a process, and the final results may not be visible for several weeks. Be patient and follow your aftercare instructions carefully for the best results.
